

Man Made Global Cooling Begins

A Total Reset of Time with Zero Carbon Ammonia and No-tillage.

The Three Legged Stool of Zero Carbon, Green Anhydrous Ammonia.

**We build Green Hydrogen, We ship Green Anhydrous Ammonia.
Using the most abundant power source on the planet.**

1. PV or Solar, 40% to 70% of the time.
2. Wind or Wind Power, 48% to 69% of the time.
3. Backup, Canola, Sunflower, and Soy, All lowest GHG, No-tillage, Renewable Oil.

The fourth leg is coming. Advanced Storage Technologies to be announced in 2024.

Seeking out in 1 decade, 1 dollar for 1 Kilogram of Hydrogen. The triple 1 program.

With ample storage at your enterprise. Always available 24/7 in Seven Year contracts.

That means Green Zero Carbon Ammonia will cost out at \$157 per ton and built locally with no Grid Connection.

Built local and always available with Decagon Plant Design.
