

Man Made Global Cooling Begins

A Total Reset of Time with Zero Carbon Ammonia and No-tillage.

Several plant sites have been reviewed. It is apparent that growth can be made rapidly building optimized scale plants. Looking ahead, 2,000 plants are planned by 2045

The Three Legged Stool of Zero Carbon, Green Anhydrous Ammonia.

We build Green Hydrogen, We ship Green Anhydrous Ammonia.
Using the most abundant power source on the planet.

1. PV or Solar, 40% to 70% of the time.
2. Wind or Wind Power, 48% to 69% of the time.
3. Backup, Lowest GHG, Green Hydrogen and Ammonia Battery.
4. The fourth leg is coming. Advanced Storage Technologies to be announced in 2024.
5. Seeking out in 1 decade, 1 dollar for 1 Kilogram of Hydrogen. The triple 1 program.
6. With ample storage at your enterprise. Always available 24/7 in Seven Year contracts.
7. That means Green Zero Carbon Ammonia will cost out at \$157 per ton and built locally with no Grid Connection.
8. Built local and always available with Decagon Plant Design.
